

# How to Open/View PST Files

Open the Desktop application for Microsoft Outlook and click File > Open & Export > Import/Export:

Keep the default selection of "Import from another program or file" and click Next >

Select Outlook Data File (.pst) and click Next >

Browse for the location of the PST file you are opening, leave the other options at default, and click Next >

On this pop-up, you will see the mailbox that you are importing appear on the left hand-side, underneath any of your current folders/mailboxes. Keep default values and press Next >

Importing will then take a few minutes:

To go to the inbox and other emails of the pst file, expand "Top of Information Store"

If you have a second PST file to import, repeat the above steps as before.

The PST files may have been split into multiple parts to reduce file size and file corruption.
